

# COSMO CONSULT

Business-Software for People

INTERFACES IN AL / BUSINESS CENTRAL

Tobias Fenster, May 18 2020

# AGENDA

Why does it matter?

How is it built?

Go for it!

## WHY INTERFACES? → COMPONENTIZATION!

1. Define a component
  - Describe the purpose (what does it do?), not the implementation (how is it done?)
  - Allow to think more easily and clearly about the architecture of your solution and how different parts (components...) interact
2. Replace a component (runtime / design time)
  - Allow to switch implementation very easily (German tax calculation vs. Danish tax calculation, standard price calculation vs. advanced price calculation)
  - Allow to override standard code by replacing the whole component
3. Extend a component
  - Add functionality

## DEMO

Define the interface  
Implement the interface  
Create the implementation list and handler  
Use the interface  
Add a new implementation

# WHY INTERFACES? → COMPONENTIZATION!

A diagram illustrating componentization. It features a large olive-green rectangle representing 'The base application'. Inside the top-right corner of this rectangle is a smaller blue rectangle with a white border, containing the text 'Price calculation with forecast'.

Price calculation  
with forecast

The base application

1. Define a component
  - Describe the purpose (what does it do?), not the implementation (how is it done?)
  - Allow to think more easily and clearly about the architecture of your solution and how different parts (components...) interact
2. Replace a component (runtime / design time)
  - Allow to switch implementation very easily (German tax calculation vs. Danish tax calculation, standard price calculation vs. advanced price calculation)
  - Allow to override standard code by replacing the whole component
3. Extend a component
  - Add functionality

# INTERFACES – DECOUPLING

Sports evaluation report

GetBasketballEvaluation()

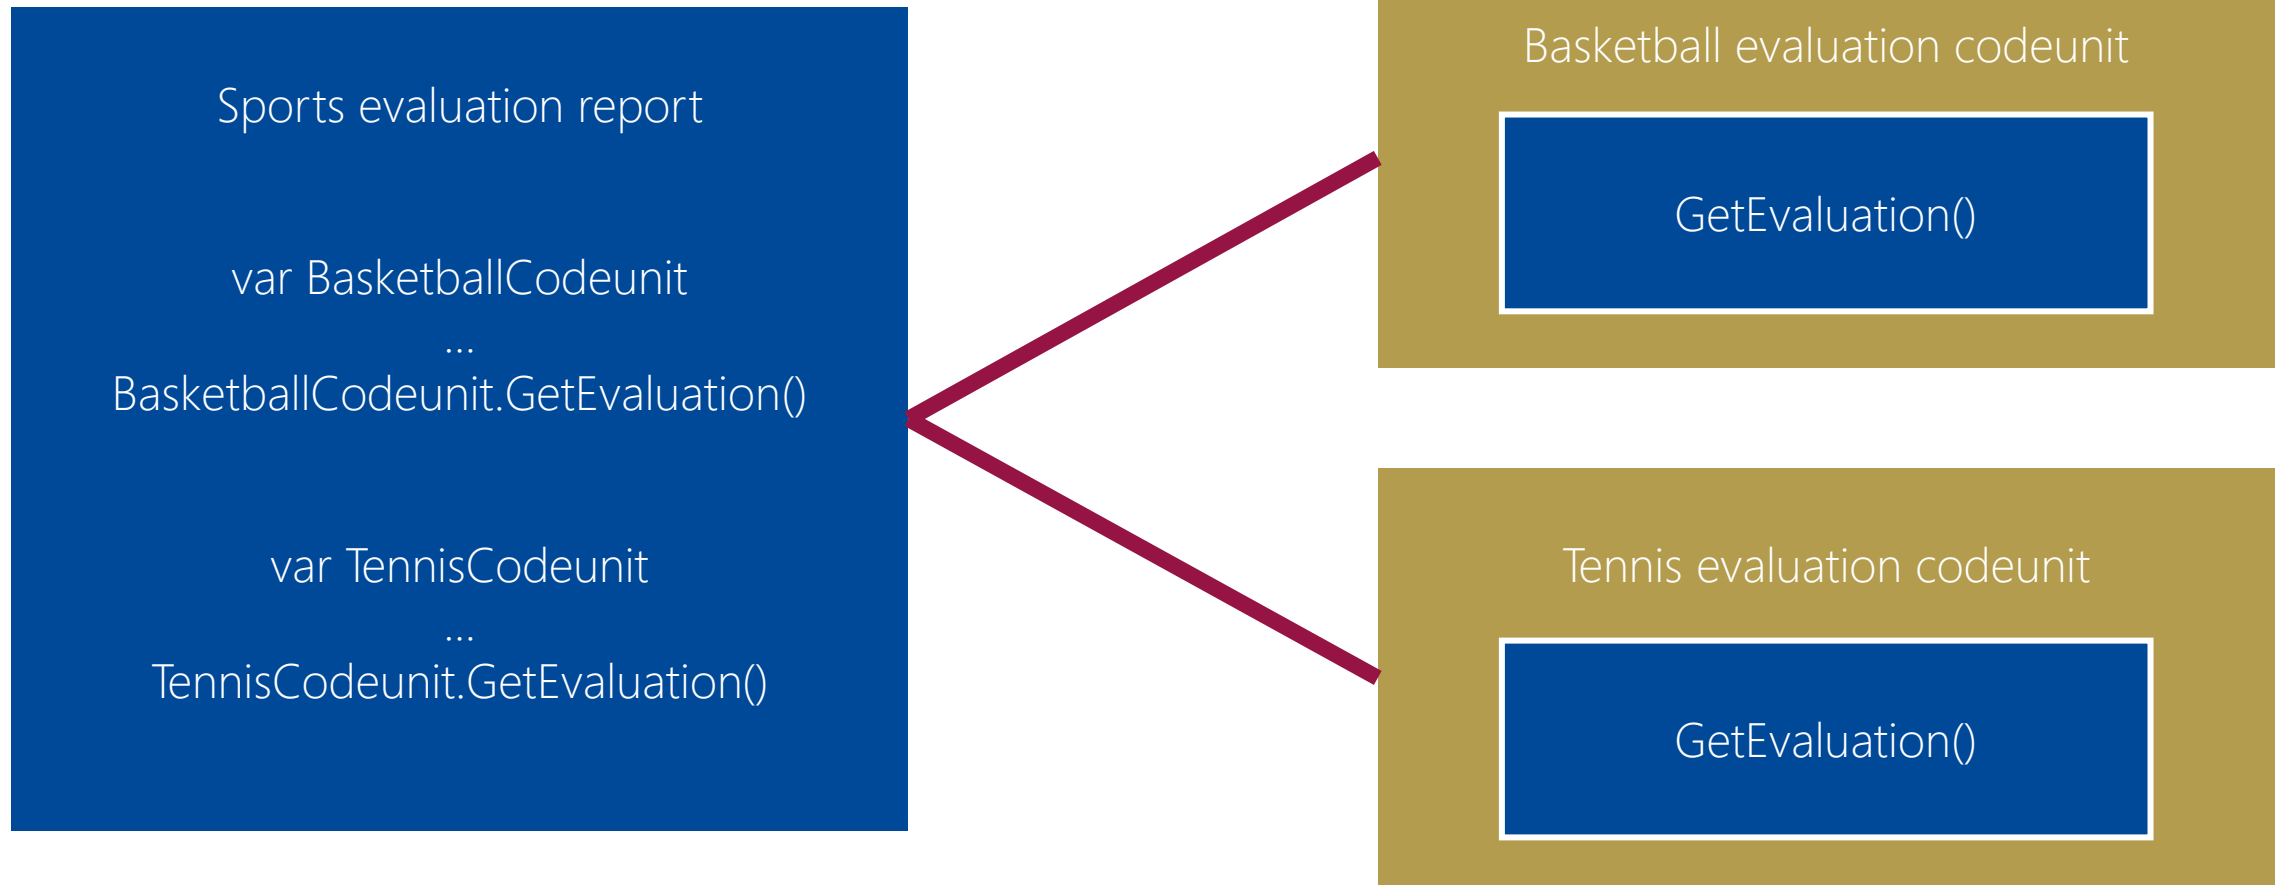

GetTennisEvaluation()

Basketball evaluation codeunit

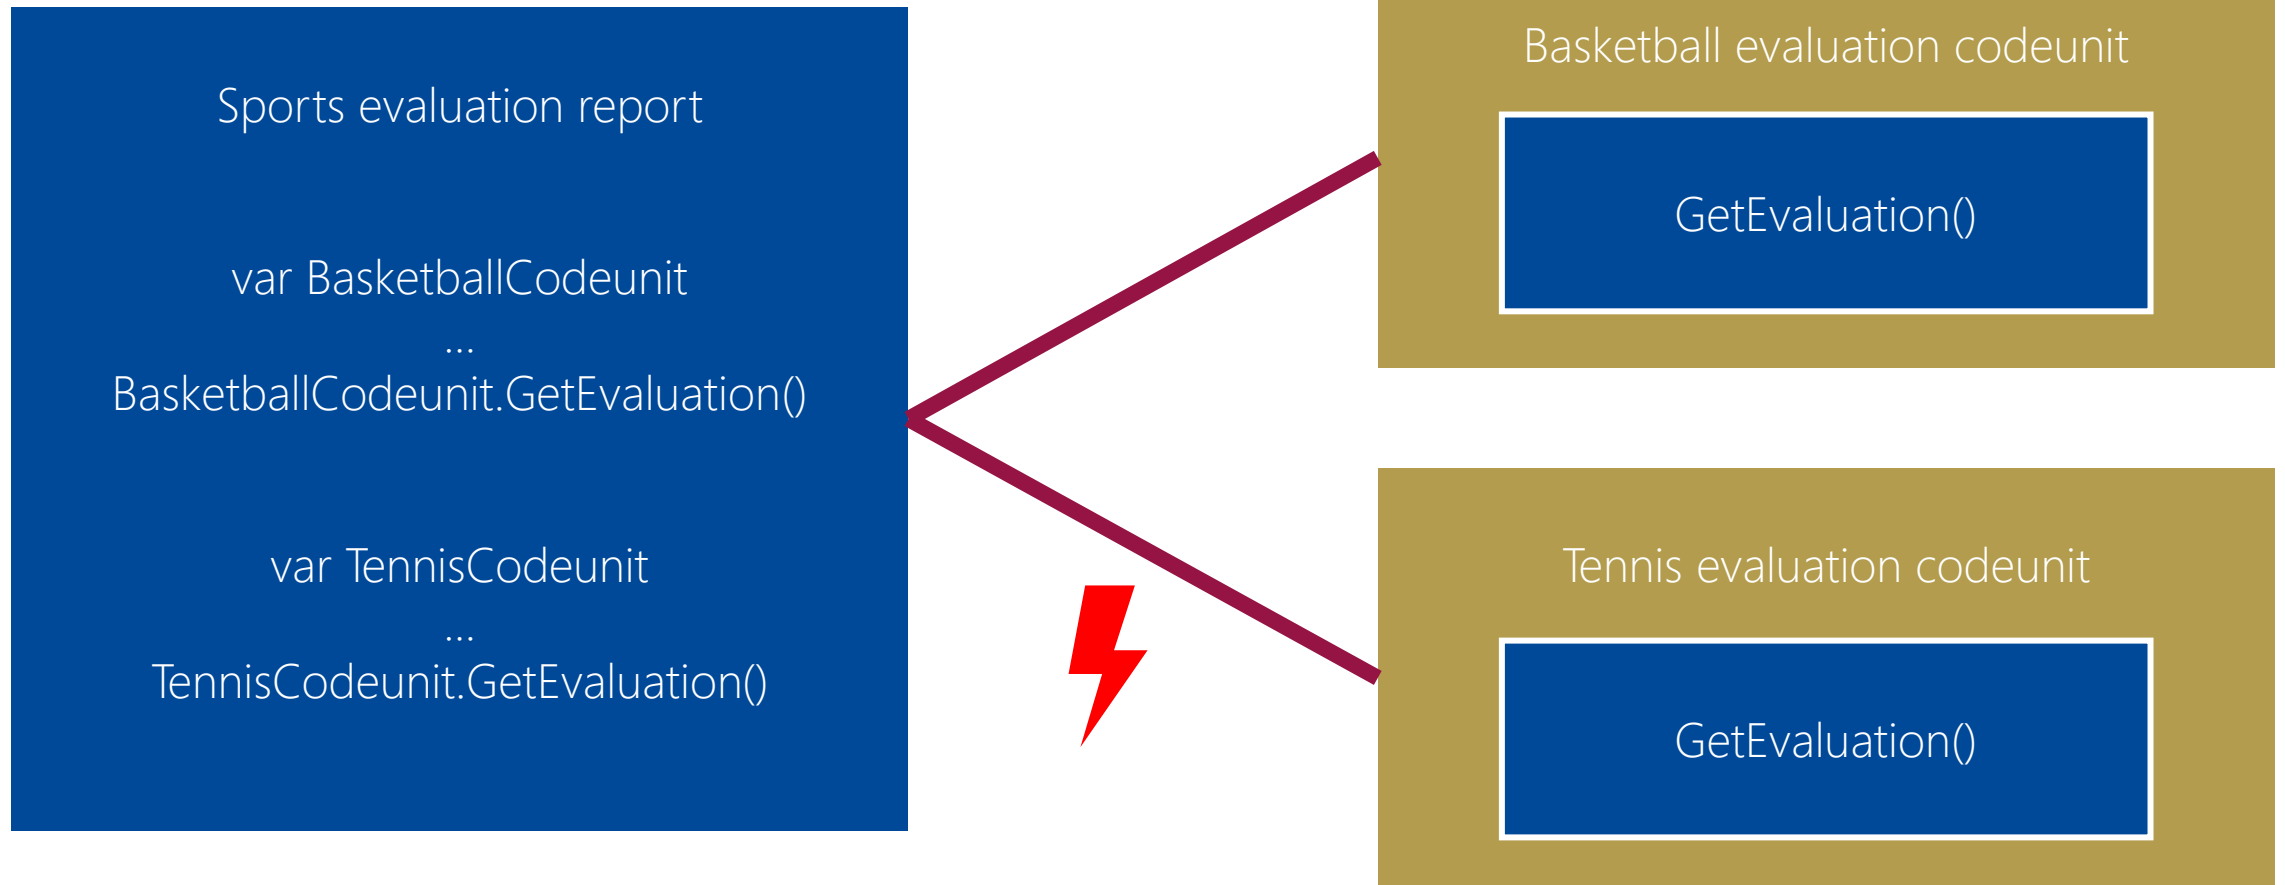

Tennis evaluation codeunit

# INTERFACES – DECOUPLING

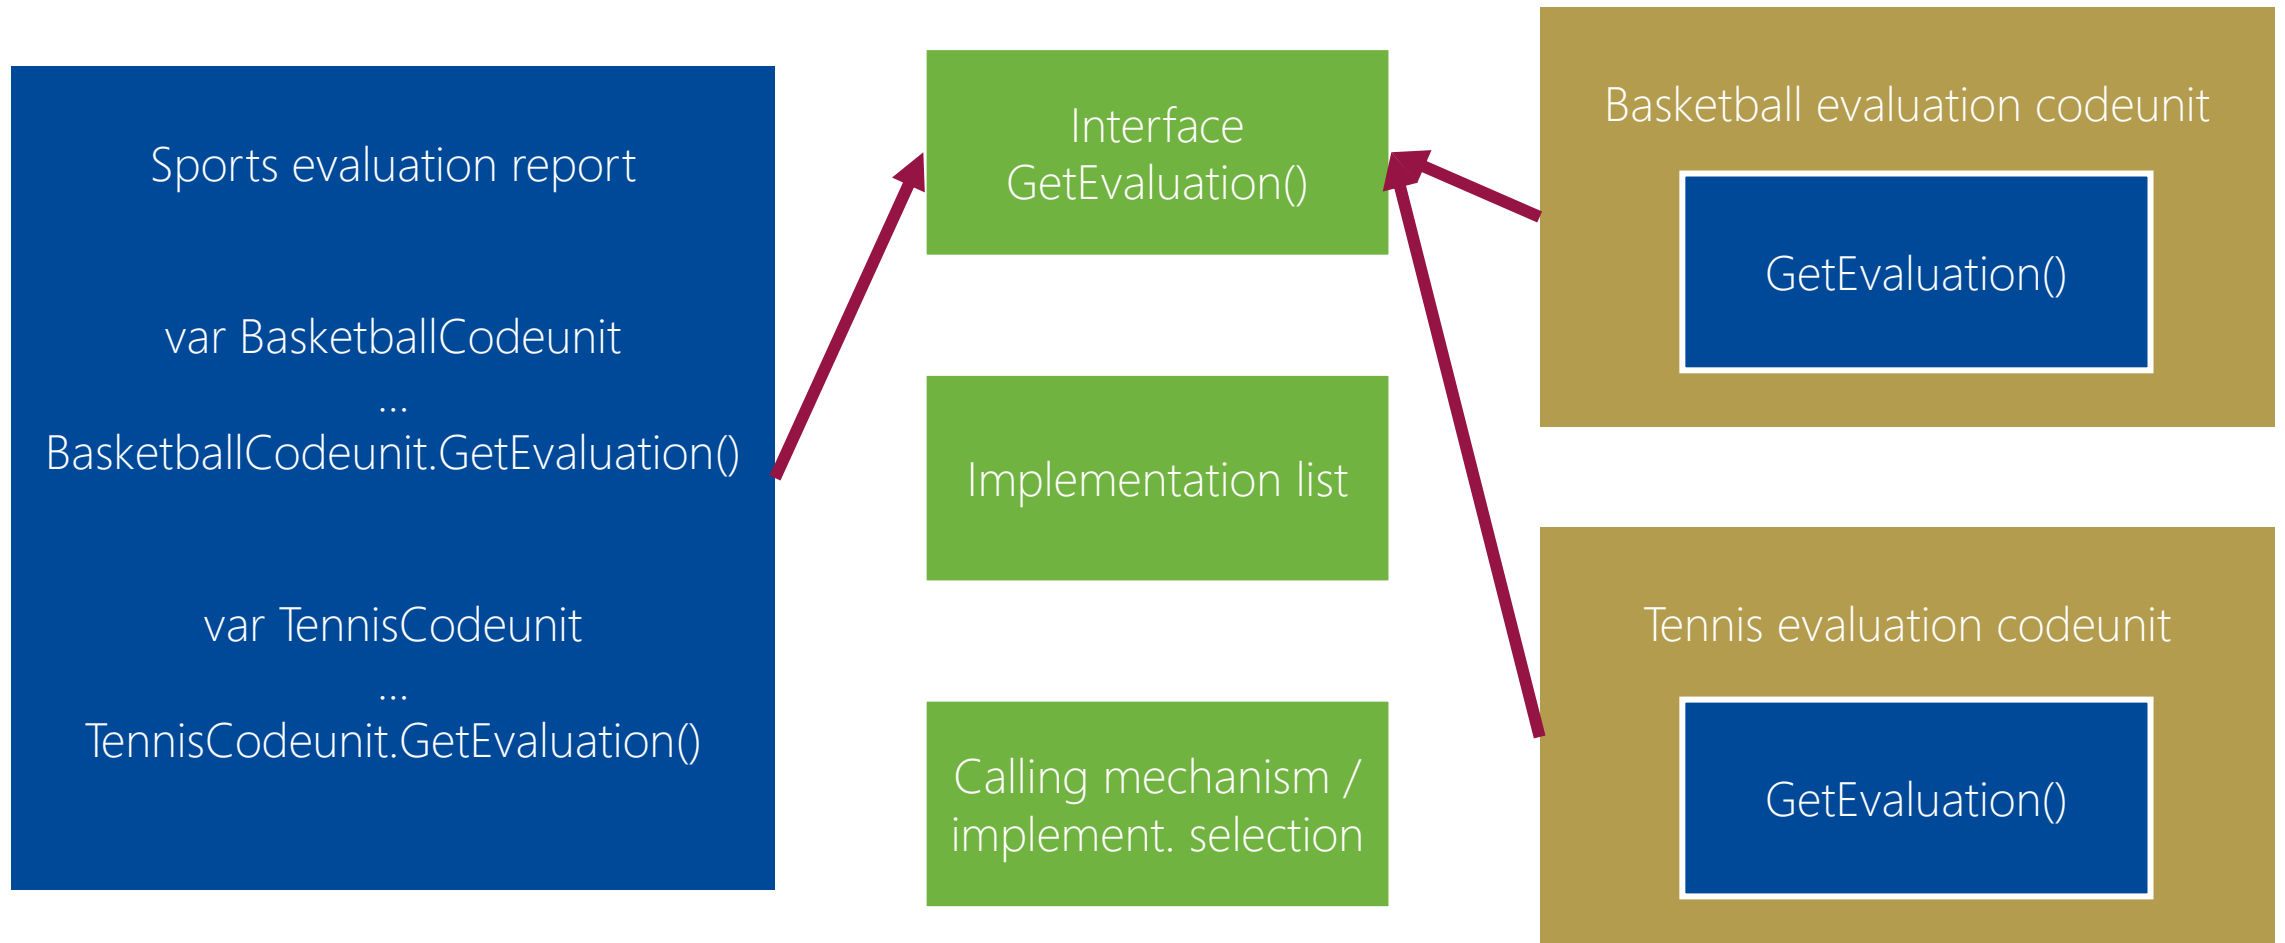

# INTERFACES – DECOUPLING

# INTERFACES – DECOUPLING

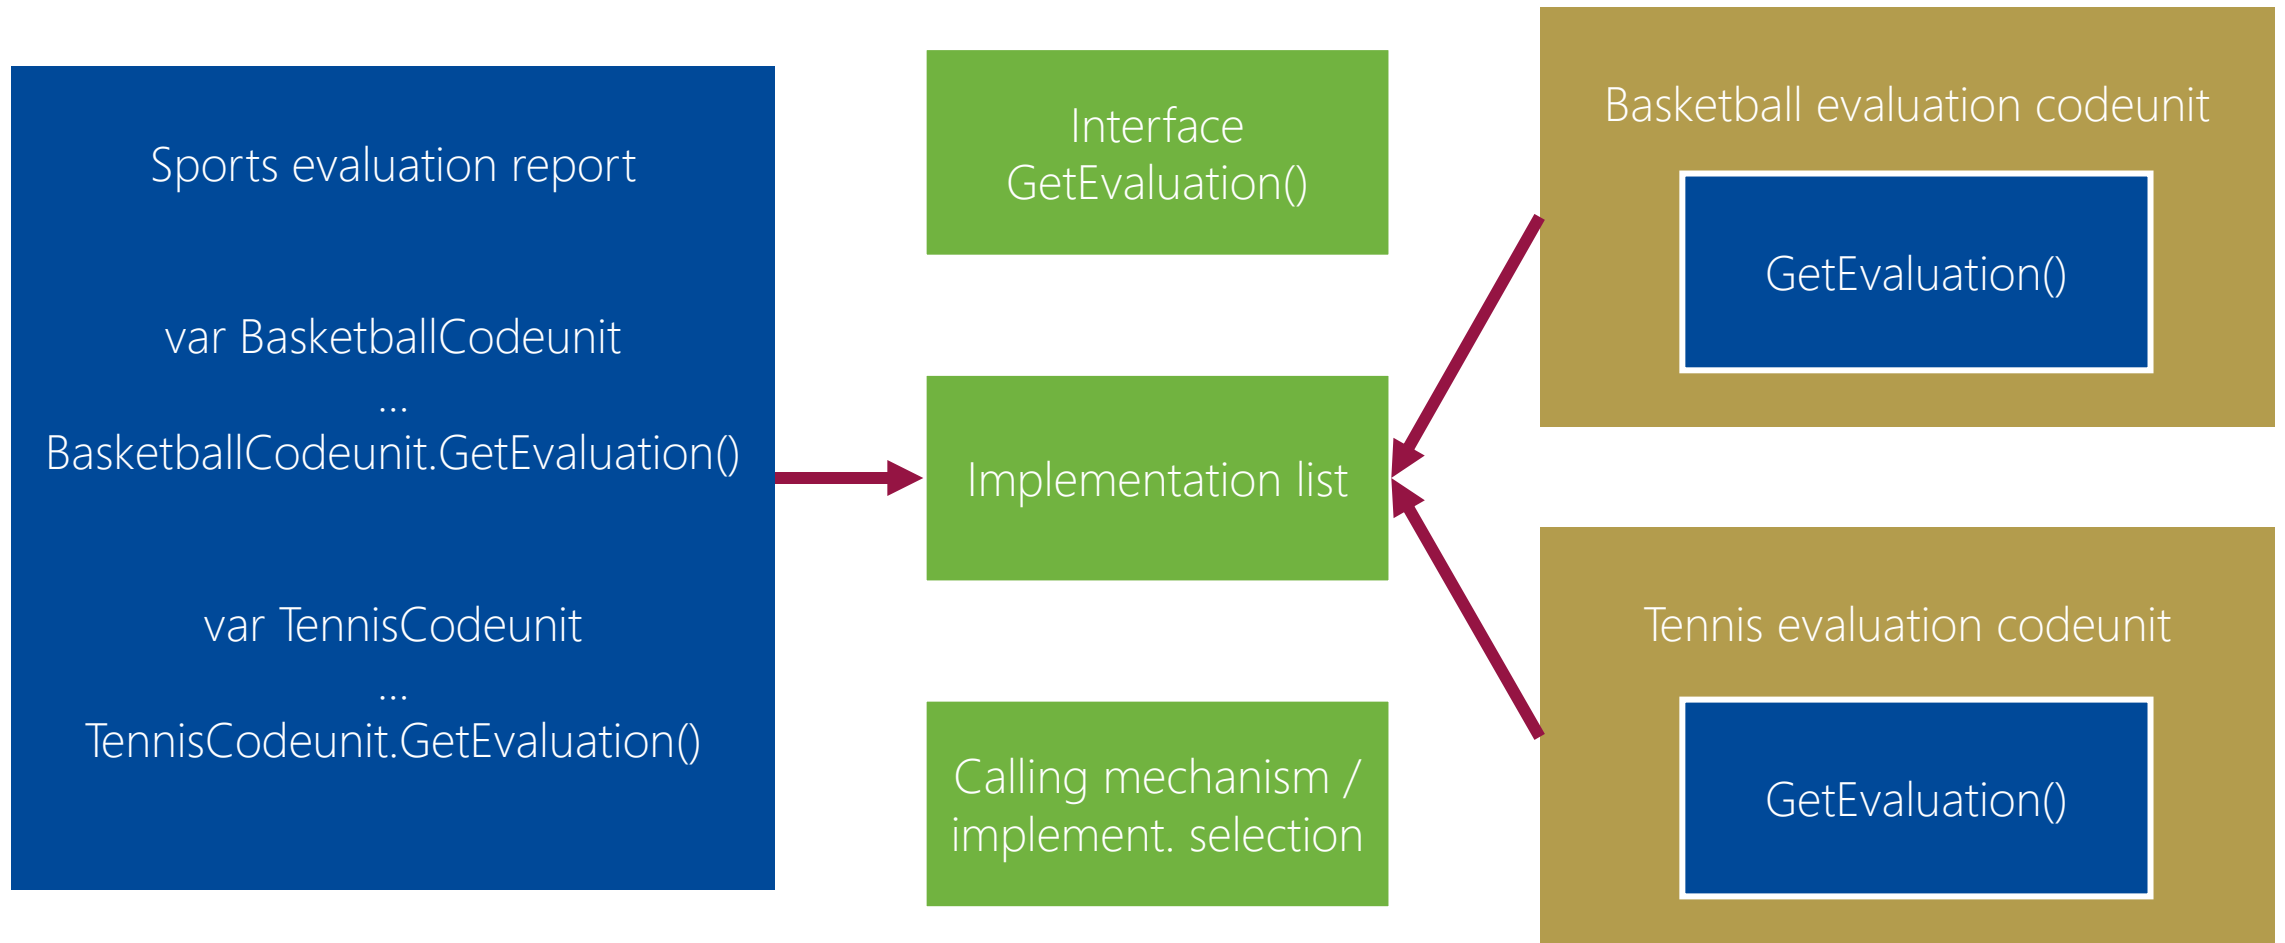

# INTERFACES – DECOUPLING

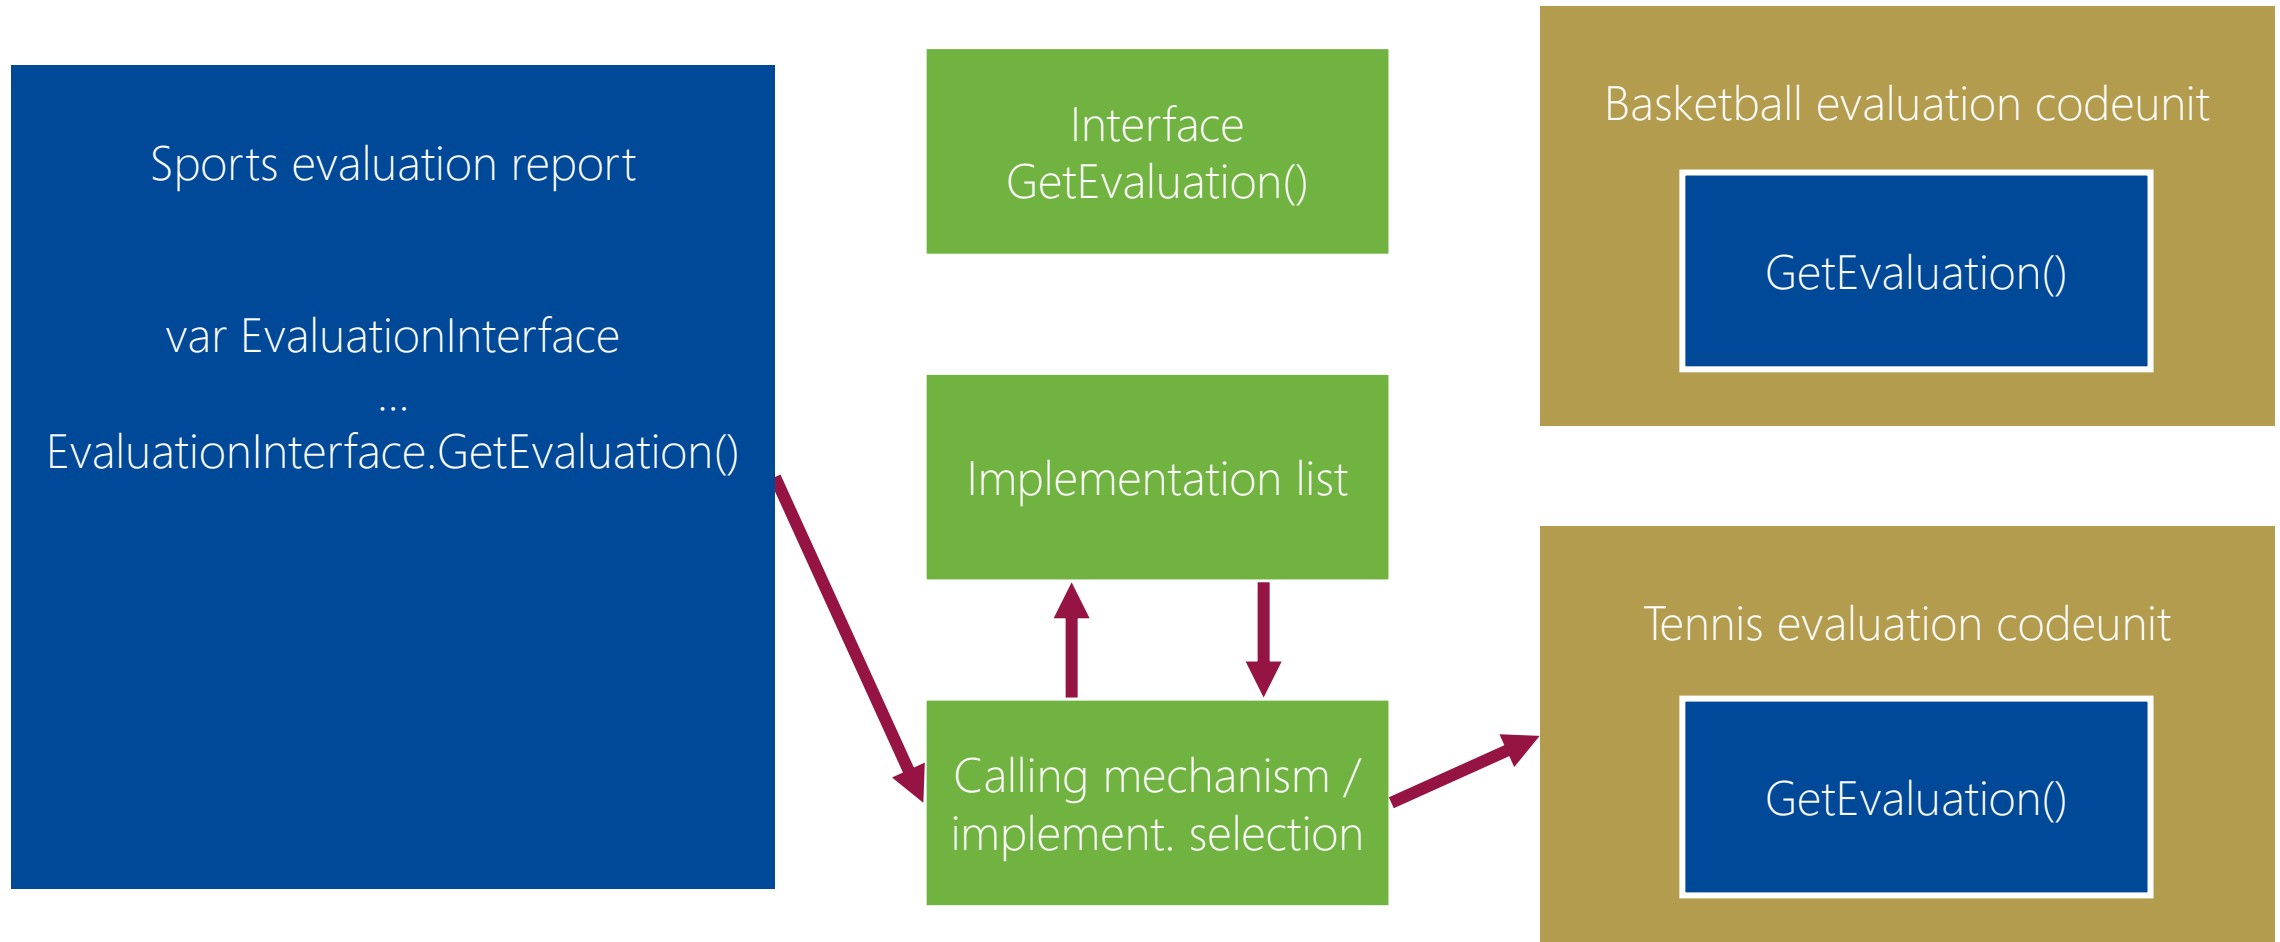

# INTERFACES – DECOUPLING

# INTERFACES – DECOUPLING

# WHY DECOUPLING? REMOVING

Sports evaluation report

```
var EvaluationInterface  
...  
EvaluationInterface.GetEvaluation()
```

Interface  
GetEvaluation()

Implementation list

Calling mechanism /  
implement. selection

Basketball evaluation codeunit

GetEvaluation()

Tennis evaluation codeunit

GetEvaluation()

# WHY DECOUPLING? REPLACING

Sports evaluation report

```
var EvaluationInterface
...
EvaluationInterface.GetEvaluation()
```

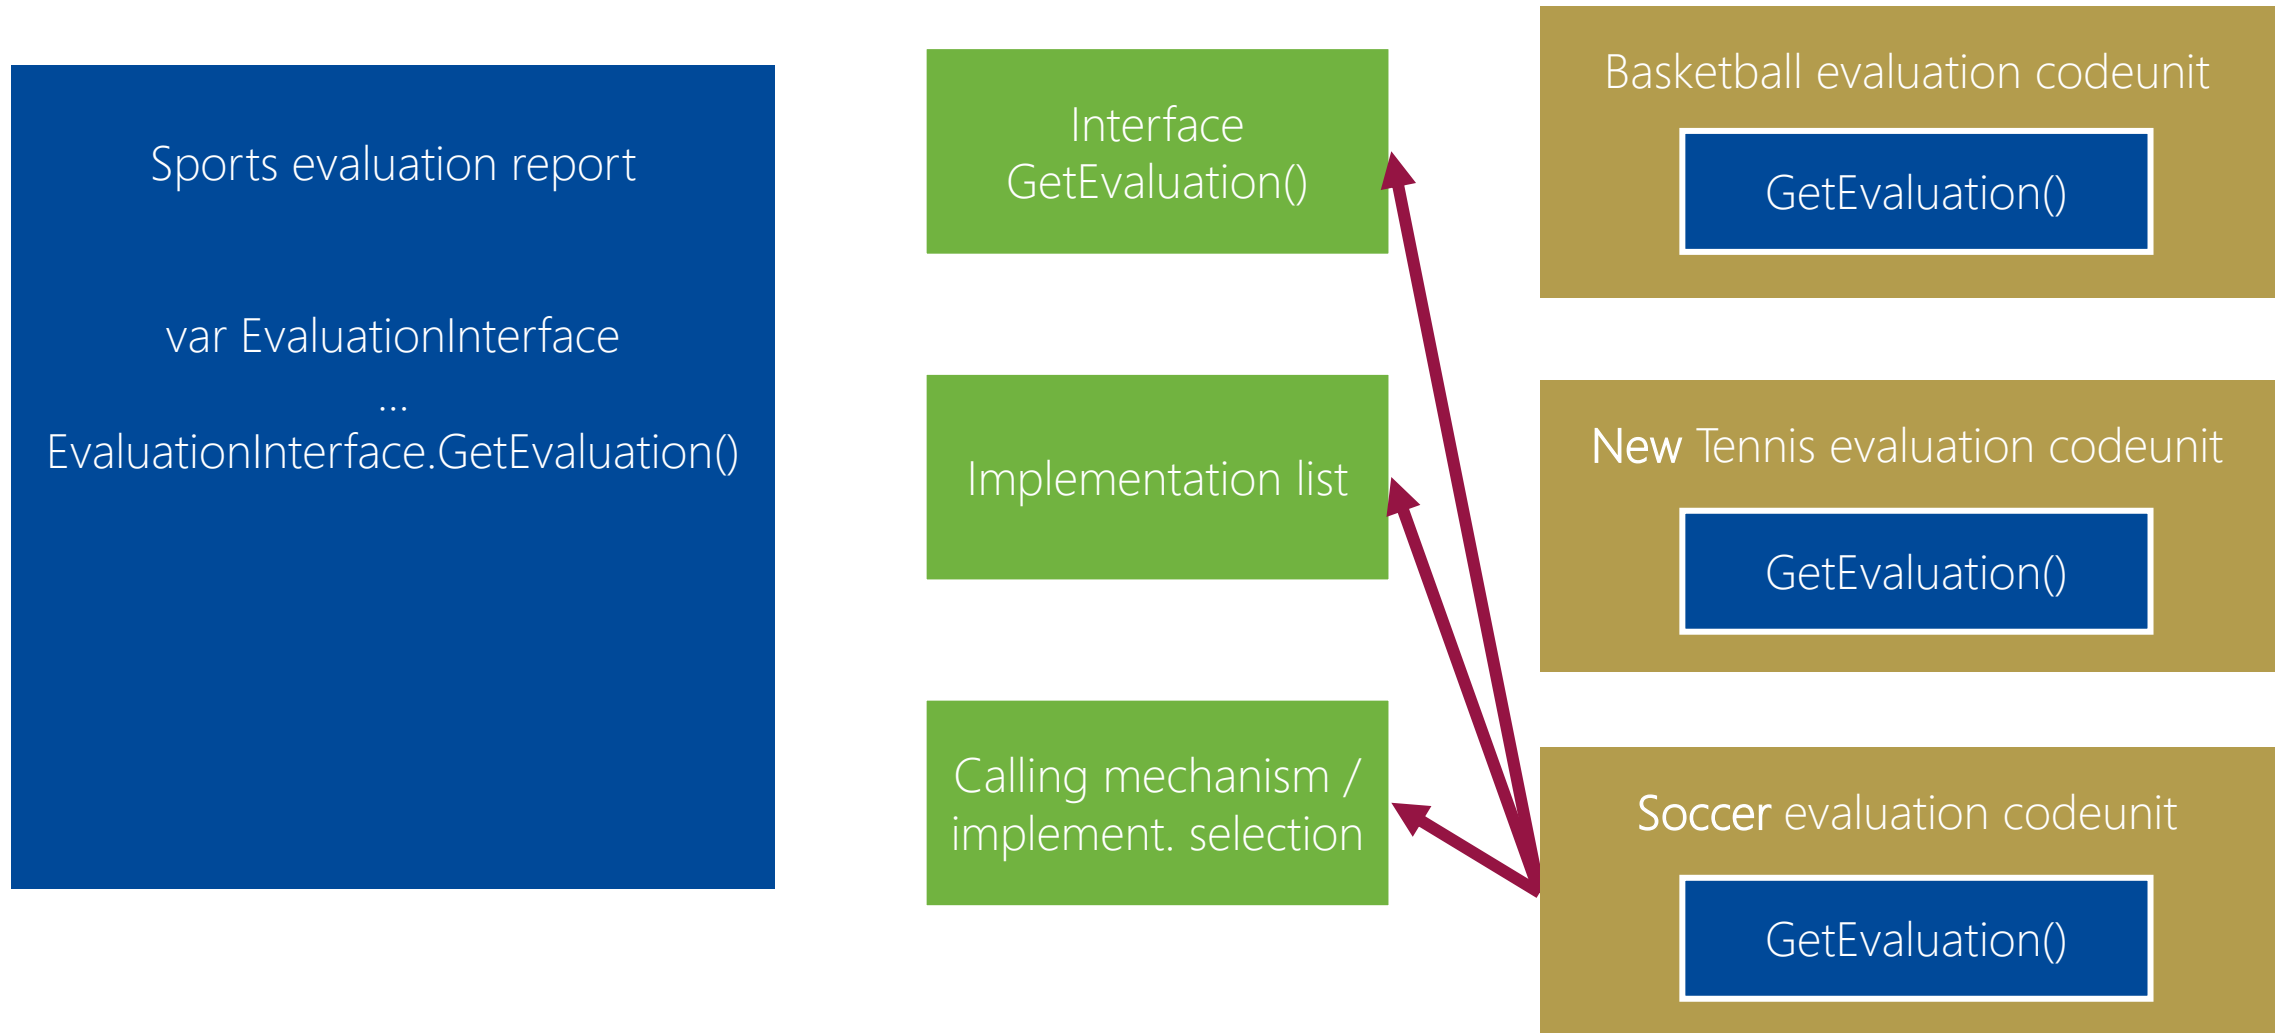

Interface  
GetEvaluation()

Implementation list

Calling mechanism /  
implement. selection

# WHY DECOUPLING? ADDING

# WHY DECOUPLING? EXTENDING

Sports evaluation report

```
var EvaluationInterface
...
EvaluationInterface.GetEvaluation()
EvaluationInterface.GetGraph()
```

Interface  
GetEvaluation()  
GetGraph()

XY evaluation codeunit

GetEvaluation()

GetGraph()

# DEMO

Define the interface

Implement the interface

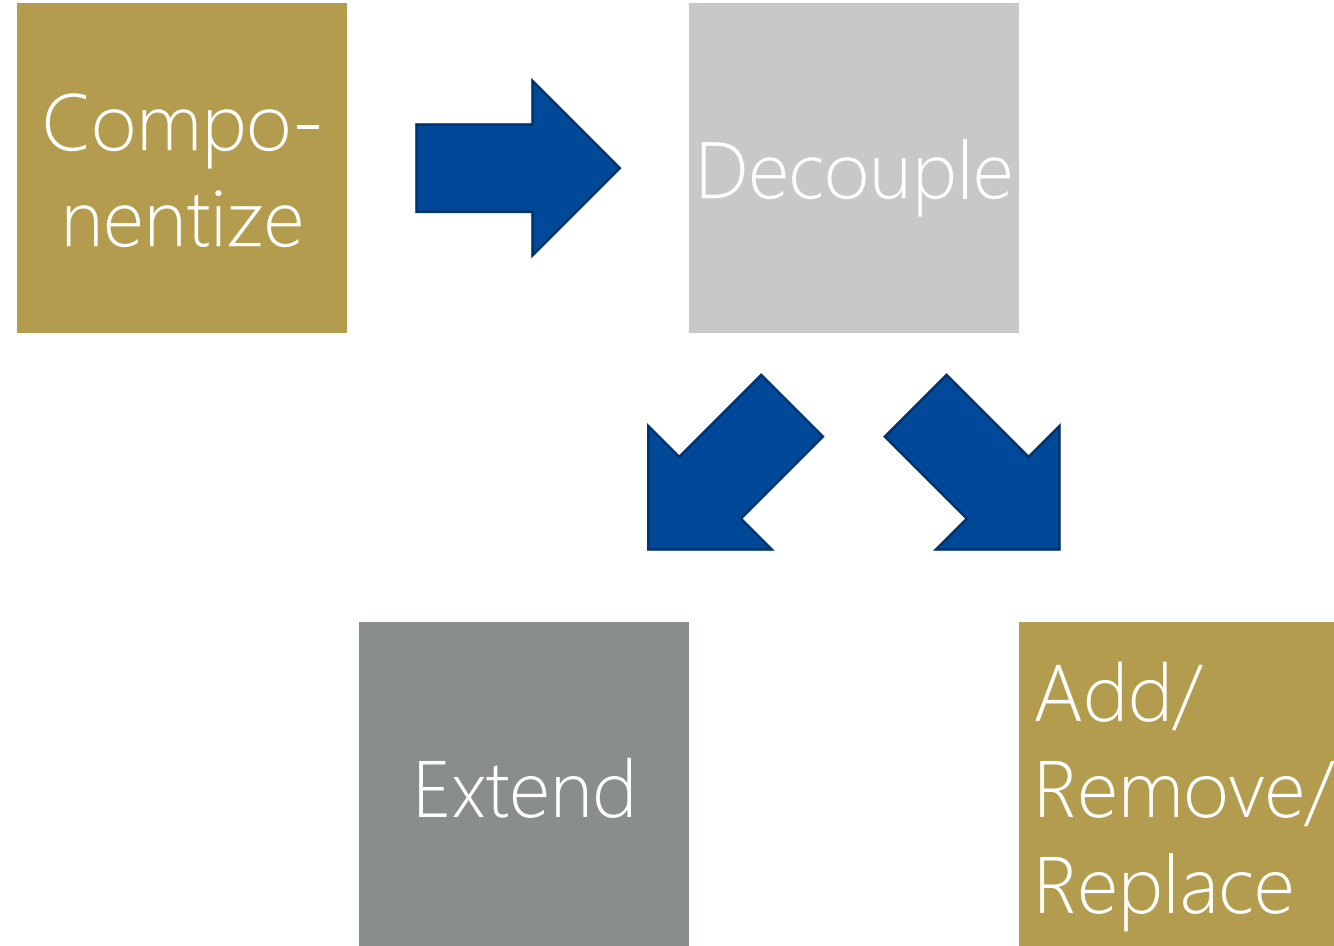

Create the implementation list and handler

Use the interface

Add a new implementation
